School of Economics and Management (SEM)

Question 1

Identify whether the following data types are quantitative or qualitative:

a) The number of students in a classroom.

b) The type of car a person drives.

c) A person's blood pressure reading.

d) The different genres of music people listen to.

e) A survey response on customer satisfaction (Very Dissatisfied, Neutral, Very Satisfied).

Question 2

A travel company is analyzing customer preferences to design personalized vacation packages. It collects the following data:

- **Customer Age** (e.g., 25, 34, 52).
- **Preferred Type of Vacation** (e.g., adventure, beach, cultural).
- **Number of Trips Taken in the Past Year** (e.g., 2, 4, 0).
- **Customer Feedback** (e.g., "Amazing trip, but the hotel could be better").
- **Booking Time** (Real-time data showing when customers book vacations, such as "3 months in advance" or "last minute").

Based on the above scenario,

1. Classify the data in this scenario as **quantitative** or **qualitative** and identify the appropriate type of data.
2. If the company wants to create clusters of customers (e.g., frequent travellers, adventure lovers), which data would be most important? Why?
3. The company plans to send targeted promotions to customers who prefer "beach vacations" and book trips "last minute."

- How can this data be used to identify the target audience?
- What challenges might arise in using real-time booking data effectively?

Question 3

You are conducting a study on student performance at your university. Identify two examples of **quantitative data** and two examples of **qualitative data** that you might collect. Justify why you feel that these data are important for your study,
