DESCRIPTION OF COURSEWORK

Course Code	EEE418
Course Name	Renewable Energy
Lecturer	Dr. Abdul Khaliq Rasheed
Academic Session	2025/09
Assessment Title	Renewable Energy Assignment (Group Project)

A. Introduction/ Situation/ Background Information

This assignment requires you to conduct in-depth research and analysis on the impact of US tariffs on the development of green energy sectors within the Association of Southeast Asian Nations (ASEAN) region. You will investigate how these tariffs have affected the deployment, trade, and investment in renewable energy technologies across ASEAN member states. The goal is to produce a high-quality, original research article suitable for submission to an academic journal, specifically *Energy Policy*. This assignment contributes to 40% of your course assessment.

B. Course Learning Outcomes (CLO) covered

At the end of this assessment, students are able to:

CLO 3 Appraise the sustainability of energy sources and conversion systems.

C. University Policy on Academic Misconduct

1. Academic misconduct is a serious offense in Xiamen University Malaysia. It can be defined as any of the following:
   i. **Plagiarism** is submitting or presenting someone else's work, words, ideas, data or information as your own intentionally or unintentionally. This includes incorporating published and unpublished material, whether in manuscript, printed or electronic form into your work without acknowledging the source (the person and the work).
   ii. **Collusion** is two or more people collaborating on a piece of work (in part or whole) which is intended to be wholly individual and passed it off as own individual work.

iii. **Cheating** is an act of dishonesty or fraud in order to gain an unfair advantage in an assessment. This includes using or attempting to use, or assisting another to use materials that are prohibited or inappropriate, commissioning work from a third party, falsifying data, or breaching any examination rules.

2. All assessments submitted must be the student's own work, without any materials generated by AI tools, including direct copying and pasting of text or paraphrasing. Any form of academic misconduct, including using prohibited materials or inappropriate assistance, is a serious offense and will result in a zero mark for the entire assessment or part of it. If there is more than one guilty party, such as in case of collusion, all parties involved will receive the same penalty.

D. Instruction to Students

Assignment Requirements:

1. **Article Length:** The final article must be no less than **10 pages** and no more than **15 pages** in length, single-line spacing, including all text, figures, tables, and references.
2. **Data Sources:**
    - You must use reliable data sources to support your analysis. These sources include, but are not limited to:
        - Government statistical agencies (e.g., US Energy Information Administration, ASEAN national energy agencies, China Energy, etc.).
        - ASEAN reports and publications.
        - Energy audit reports from reputable organizations (IEA, IRENA, World Bank, etc).
        - Company annual reports (of relevant energy companies for ex. JinkoSolar, Vestas, GE, Siemens).
        - Peer-reviewed academic journal articles published not later than 5 years.
    - All data sources must be properly cited using the *Energy Policy* journal's referencing style.

- **Important:** You are required to compile and analyze the raw data. Copying existing graphs or figures directly from published journal articles is strictly prohibited. You must create your own original visualizations based on the data you gather.

3. **Data Visualization:**
    - The article must include original graphs, charts, and/or infographics to present your data and findings effectively.
    - All visualizations must be of high resolution and professional quality, suitable for publication.
    - Ensure that all visualizations are clearly labeled, titled, and referenced within the text.
    - Consider using a variety of visualization types (e.g., line graphs, bar charts, scatter plots, maps) to best represent the data.
4. **Content and Analysis:**
    - The article should provide a strong and critical analysis of the impact of US tariffs on green energy development in the ASEAN region.
    - Your analysis should include, but is not limited to, the following:
        - A clear explanation of the specific US tariffs relevant to green energy technologies (e.g., solar panels, wind turbine components).
        - An overview of the green energy sector in key ASEAN countries.
        - An assessment of the effects of the tariffs on trade flows of green energy goods between the US and ASEAN.
        - An examination of how tariffs have affected investment decisions in green energy projects within ASEAN.
        - Analysis of the impact on the cost and deployment of renewable energy technologies in ASEAN.
        - Discussion of any policy responses from ASEAN governments or businesses.
        - Analysis of trends and latest developments related to US tariffs and green energy initiatives in the ASEAN region.
    - The analysis should be supported by evidence from your research and presented in a logical and coherent manner.

5. **Journal Submission Format:**
    - The final article must be formatted according to the submission guidelines of the ***Energy Policy*** journal.
    - You are responsible for familiarizing yourself with these guidelines, which can be found on the journal's website.
    - Pay close attention to formatting requirements for the title page, abstract, keywords, main text, headings, citations, references, figures, and tables.
6. **Submission Deadlines:**
    - **Paper Outline:** Week 7 of the semester. The outline should include:
        - An interesting title, clear research question/objectives and problem statement.
        - A brief overview of the key topics and arguments to be covered.
        - A preliminary list of data sources.
        - A tentative structure of the article (sections and subsections).
    - **First Draft:** Week 10 of the semester. This should be a complete draft of your article, including all sections, data, and analysis in Microsoft Word format.
    - **Final Submission:** 22nd Dec 2025, Week 13 of the semester. The final article must to submitted via Moodle, in Microsoft Word format, incorporating feedback from the first draft and formatted according to *Energy Policy* journal guidelines. A **physical copy** with the marking rubrics and assignment cover page must also be submitted to the instructor.
7. **Usage of AI tools and Plagiarism Check.**
    - Student must be responsible while using AI tools. Total copy paste of the AI content will result in **SIGNIFICANT LOSS OF MARKS.**
    - Students must attach a turn it in report with the assignment.
    - Students must also include authors contribution details at the end of the paper. The authorship order of the article must be decided within the group. The correspondence and last author must the name of the instructor since this article will be reviewed and enhanced accordingly.
    - Students must also include an acknowledgment that their contributions can be submitted to any suitable journal for publication by acknowledging their names.

E. Evaluation Breakdown

No.	Component Title	Percentage (%)
1.	Quality and Depth of Research	25
2.	Strength and Clarity of Analysis	30
3.	Effectiveness of Data Visualization	15
4.	Organization and Structure of the Article	10
5.	Clarity and Conciseness of Writing	10
6.	Adherence to *Energy Policy* Journal's Submission Guidelines	5
7.	Timeliness of Submissions	5
	TOTAL	**100**

F. Task(s)

Students are required to improve the manuscript while ensuring the following four aspects;

Research Quality: Students are expected to conduct thorough and in-depth research on the impact of US tariffs on green energy development in the ASEAN region.

Source Utilization: This involves using a wide range of relevant and reliable sources, including academic journals, government reports, and industry publications.

Contextual Understanding: Students should demonstrate a strong understanding of the research topic and its context within the broader energy policy landscape.

Evidence of Understanding: The quality and depth of research will be evaluated based on the student's ability to gather relevant information and use it effectively to support their analysis and arguments in the article.

APPENDIX 1

MARKING RUBRICS

Component Title					Percentage (%)		
Criteria	Score and Descriptors					Weight (%)	Marks
	Excellent	Good	Average	Need Improvement	Poor		
Quality and Depth of Research	Demonstrates comprehensive, in-depth research using a wide range of academic sources (>15 peer-reviewed papers). Critically utilizes up-to-date, quantitative data, such as: high-frequency (monthly/quarterly) trade data (e.g., HS 854140), official government reports on the IRA, and industry reports. All data is correctly sourced and interpreted to support the analysis.	Demonstrates good research using relevant and reliable sources (10-15 peer-reviewed papers). Incorporates relevant quantitative data from reliable sources (e.g., UN Comtrade, IEA, SEIA). Shows a good understanding of the research context, including recent policy changes.	Demonstrates adequate research using a sufficient number of sources (5-9 peer-reviewed papers). Uses some relevant data, but may rely on annual or aggregate statistics, lacking the necessary detail. Shows a basic understanding of the research topic and context.	Demonstrates limited research, with fewer than 5 relevant sources. Uses anecdotal or unverified data, or fails to incorporate quantitative evidence. Shows a limited understanding of the topic and misses key policy developments (e.g., the IRA).	Demonstrates very poor or insufficient research, with minimal or inappropriate sources. Fails to incorporate any quantitative data or uses entirely inappropriate sources. Shows little to no understanding of the research topic.	**25**	
Strength and Clarity of Analysis	Provides insightful, original, and rigorously supported analysis. The analysis utilizes a structured comparative or quantitative methodology (e.g., a simple econometric model, DiD approach, or detailed case	Provides sound analysis with strong supporting evidence. Clearly applies an appropriate analytical framework (e.g., supply chain mapping or policy impact assessment) to key variables. Identifies relevant trends	Provides adequate analysis, but may lack methodological depth or originality. Analysis is largely descriptive, summarizing trends rather than explaining the underlying policy mechanisms.	Provides limited analysis, with weak or insufficient evidence and no clear methodology or framework. Fails to discuss the policy's specific impact (e.g., focusing only on tariffs while ignoring the IRA). Interpretations	Provides very poor or no analysis. Fails to identify relevant trends or patterns, and offers no logical interpretations or conclusions on the effect of US trade policy on the ASEAN solar sector.	**30**	

	study framework). Identifies and explains complex causal mechanisms like trade deflection, the impact of domestic content requirements (45X), and the heterogeneity of impacts across different ASEAN nations. Offers logical, evidence-based interpretations and conclusions.	and patterns, and offers reasonable interpretations of policy mechanisms and their effects on green energy supply.	Offers basic interpretations and conclusions that do not extend beyond the obvious.	are unclear or unsupported by data.			
Effectiveness of Data Visualization	Creates highly effective, original, and visually appealing graphs, charts, and infographics that clearly and accurately represent the data. Visualizations are well-labeled, titled, and integrated into the text.	Creates effective graphs, charts, and infographics that accurately represent the data. Visualizations are labeled, titled, and integrated into the text.	Creates adequate graphs, charts, and infographics that represent the data. Visualizations are labeled and titled, but may lack clarity or integration into the text.	Creates limited or ineffective graphs, charts, and infographics. Visualizations may be poorly labeled, titled, or integrated into the text.	Creates very poor or no data visualizations. Visualizations are inaccurate, misleading, or absent.	**15**	
Organization and Structure of the Article	Article is exceptionally well-organized and logically structured, with a clear introduction, well-developed body paragraphs, and a strong conclusion. Follows a clear and coherent narrative.	Article is well-organized and logically structured, with a clear introduction, body paragraphs, and conclusion. Follows a coherent narrative.	Article is adequately organized and structured, with an introduction, body paragraphs, and conclusion. Narrative may lack some coherence.	Article is poorly organized and structured, with a weak introduction, underdeveloped body paragraphs, and a missing or ineffective conclusion. Lacks a coherent narrative.	Article is very poorly organized and structured, with no clear introduction, body paragraphs, or conclusion. Shows no coherent narrative.	**10**	
Clarity and Conciseness of Writing	Writing is exceptionally clear, concise, and error-free. Uses precise	Writing is clear, concise, and largely error-free. Uses appropriate	Writing is generally clear and concise, with some errors. Uses	Writing is unclear, imprecise, and contains numerous	Writing is very poor, incomprehensible, and contains pervasive errors.	**10**	

	language and avoids jargon. Conveys complex information effectively.	language and avoids excessive jargon. Conveys information effectively.	some jargon, but conveys information adequately.	errors. Uses excessive jargon and struggles to convey information.	Fails to convey information.		
Adherence to *Energy Policy* Journal's Submission Guidelines	Article adheres perfectly to all *Energy Policy* journal's submission guidelines, including formatting, citation style, and referencing.	Article adheres closely to *Energy Policy* journal's submission guidelines, with only minor deviations.	Article adheres to most *Energy Policy* journal's submission guidelines, but with some notable deviations.	Article adheres poorly to *Energy Policy* journal's submission guidelines, with significant deviations.	Article fails to adhere to *Energy Policy* journal's submission guidelines.	**5**	
Timeliness of Submissions	All submissions (outline, first draft, and final article) were submitted on time.	All submissions were submitted within the grace period.	At least one submission was submitted with a delay.	More than one submission was submitted with a delay.	No submissions were submitted.	**5**	
					TOTAL	**100**	

Note to students: Please include the marking rubric when submitting your coursework.
