G0251 FOUNDATION OF BUSINESS ANALYTICS
TUTORIAL 1

Prepared by:
Sulfeeza binti Mohd Drus
School of Economics and Management (SEM)

Question 1:

State the suitable type of analytics (descriptive, predictive, or prescriptive) for each of the following scenarios. Justify your answer.

a) An insurance firm wants to analyze fraudulent claims to predict their future losses.

b) A store manager has to review a store's historical operations, sales, financials, and customer reports to improve the store's business.

c) Autonomous or self-driving car programmers have to make millions of calculations for each trip to determine directions and speed.

d) A travel agency is setting the price of their travel packages to attract more customers and wants to know the trends in popular travel destinations.

Question 2:

A retail company, ShopEasyForYou, uses business analytics to guide its decision-making process. The company tracks the following data:

- Customer demographics (age, gender, income).
- Monthly sales figures across five regions.
- Customer feedback ratings on a scale of 1 to 5.
- Inventory turnover rates for different product categories (electronics, clothing, groceries, etc.)

1. Explain how ShopEasy can use these types of data to make more informed decisions in:
    a. Product offerings
    b. Pricing strategies
    c. Regional marketing campaigns.
2. Suppose ShopEasy's competitors are not using analytics to guide their decisions. Discuss how business analytics can give ShopEasy a **competitive advantage**.
