COM208 - 2023/04
Engineering Math IV

Lecturer:	Mounir Nisse
Office:	A4 # 465
Email:	mounir dot nisse at xmu dot edu dot my
Instructor's Webpage:	https://sites.google.com/site/mounirnisse1/
Phone:	[redacted]

Office hours:	Wednesday 2:00 pm -4:00 pm. and by appointment (Online Using MS Team).
Textbook:	James Ward Brown, Ruel Churchill, *Complex Variables and Application*, McGraw-Hill, 2017.
Prerequisites:	Engineering Maths I, Engineering Math III.

Course Learning Outcomes: This course introduces students to complex function theory and partial differential equations.

At the conclusion of this course, students should be able to:

(i) Apply the basic concepts and theories in complex function theory;
(ii) Compute complex integrals and apply residue theorem;
(iii) Solve linear partial differential equations using separation of variables.

The class will cover selected sections from James Ward Brown, Ruel Churchill's book. Please see the course schedule in departmental course webpage for more information about the Course Description .

This course has lectures (given by the instructor) twice a week where all the topics of COM208 are discussed, and a tutorial session(one hour a week) where problems and exercises are done. Attendance to the lectures and the tutorial sessions are mandatory. The instructor has also office hours. You can go to his office and discuss any problem about the course that you may have (or via MS Teams).

You will have a midterm exam and a final exam in this course (the last one is comprehensive), and between 4 and 5 quizzes and assignments a semester. Your final grade is a weighted average of your grades in all these activities (see the Grading Policy below). The quizzes are given in the tutorial meetings.

TIME/LOCATION:

- Lectures: Wednesday (A4# 109), 10:00 am -12:00 am;
- Tutorials: Thursday (A5# G05), 2:00 pm - 3:00 pm (Group 1)
- Tutorials: Thursday (A5# G05), 3:00 pm - 4:00 pm (Group 2)

GRADING POLICY:

Final Exam:	50%
Quizzes:	20% (homework, quizzes, and assignments)
Midterm Exam	30% .

Grading scale:

$A \quad = 85 - 100,$
$A^- \ = 80 - 84,$
$B^+ = 75 - 79,$
$B \quad = 70 - 74,$
$B^- = 65 - 69,$
$C^+ = 60 - 64,$
$C \quad = 55 - 59,$
$C^- = 50 - 54,$
$D^+ = 45 - 49,$
$D \quad = 40 - 44,$
$F \quad = 0 - 39.$

The learning process: You learn through practice and participation.

- Actively listen to the lecture, think, ask questions;
- Do assignments (Homework);
- Take a quiz;

- Take an exam, reflect on what you were able to do or not, and why.

EXAMS: There will be a midterm exam and a comprehensive final exam. You must bring your student ID to the exam. You can use calculators during the exams.

Any questions regarding grading/scoring of exams must be made before the exam leaves the room or no change in grade will be made. If you need more time to look at an exam and do not want to lose your right of protest, hand it back to me at the end of class, and arrange to come to office hours.

QUIZZES and ASSIGNMENTS: Calculators will be allowed. Each quiz will consist of an in-class written part. Make-ups will not be given. However if you miss a quiz due to an authorized absence (in case of injury or illness, you should obtain a medical confirmation note from your medical provider) and you contact me immediately then your grade for the missed quiz will be the average of all your other quizzes. If you feel that a quiz (or the midterm) was incorrectly graded, you should attach a note of explanation to it and resubmit it within ONE day from the day that particular quiz was returned to the class.

HOMEWORK: See the homework sheet for the problems you should work. There are a suggested homework problems from the book. As these will not be turned in, you may wish to work on them in groups. Homework will not be collected. To do well in this class, I strongly recommended you to do all the assigned homework problems for each section right after the section is covered in class. Doing these problems will help you on the exams and quizzes.

COLLABORATION: Collaboration is encouraged for Homework assignments. In order to promote understanding amongst everyone, each person in a group must write up and turn in their individual solutions. However, copying someone else work is not acceptable for Quizzes and this act of academic dishonest will be prosecuted following University policy.

LATE WORK POLICY: Late work (for which you do not have a University approved excused absence) will not be accepted.

MAKE-UP POLICY: No make-up exams will be given without a University approved excused absence (with written proof). If you have an excused absence for an exam, you must contact me no later than the second working day after the exam to schedule a make-up exam (see *University Student Rules*).

SCHOLASTIC DISHONESTY: Copying work done by others, either in-class or out-of-class, is an act of scholastic dishonesty and will be prosecuted to the full extent allowed by University policy. Collaboration on assignments, either in-class or out-of-class, is forbidden unless I grant permission. Remember the Xiamen University Malaysia Code of Honor: **"A student does not lie, cheat, or steal or tolerate those who do."** For more information about the Honor Council Rules and Procedures visit the web site of Xiamen University Malaysia. I take cheating very seriously and will prosecute any case I think I can prove.
