Ways to write your answers

Method 1: Directly write your answers on the PDF file by using iPad or whatever pad or whatever tablet…

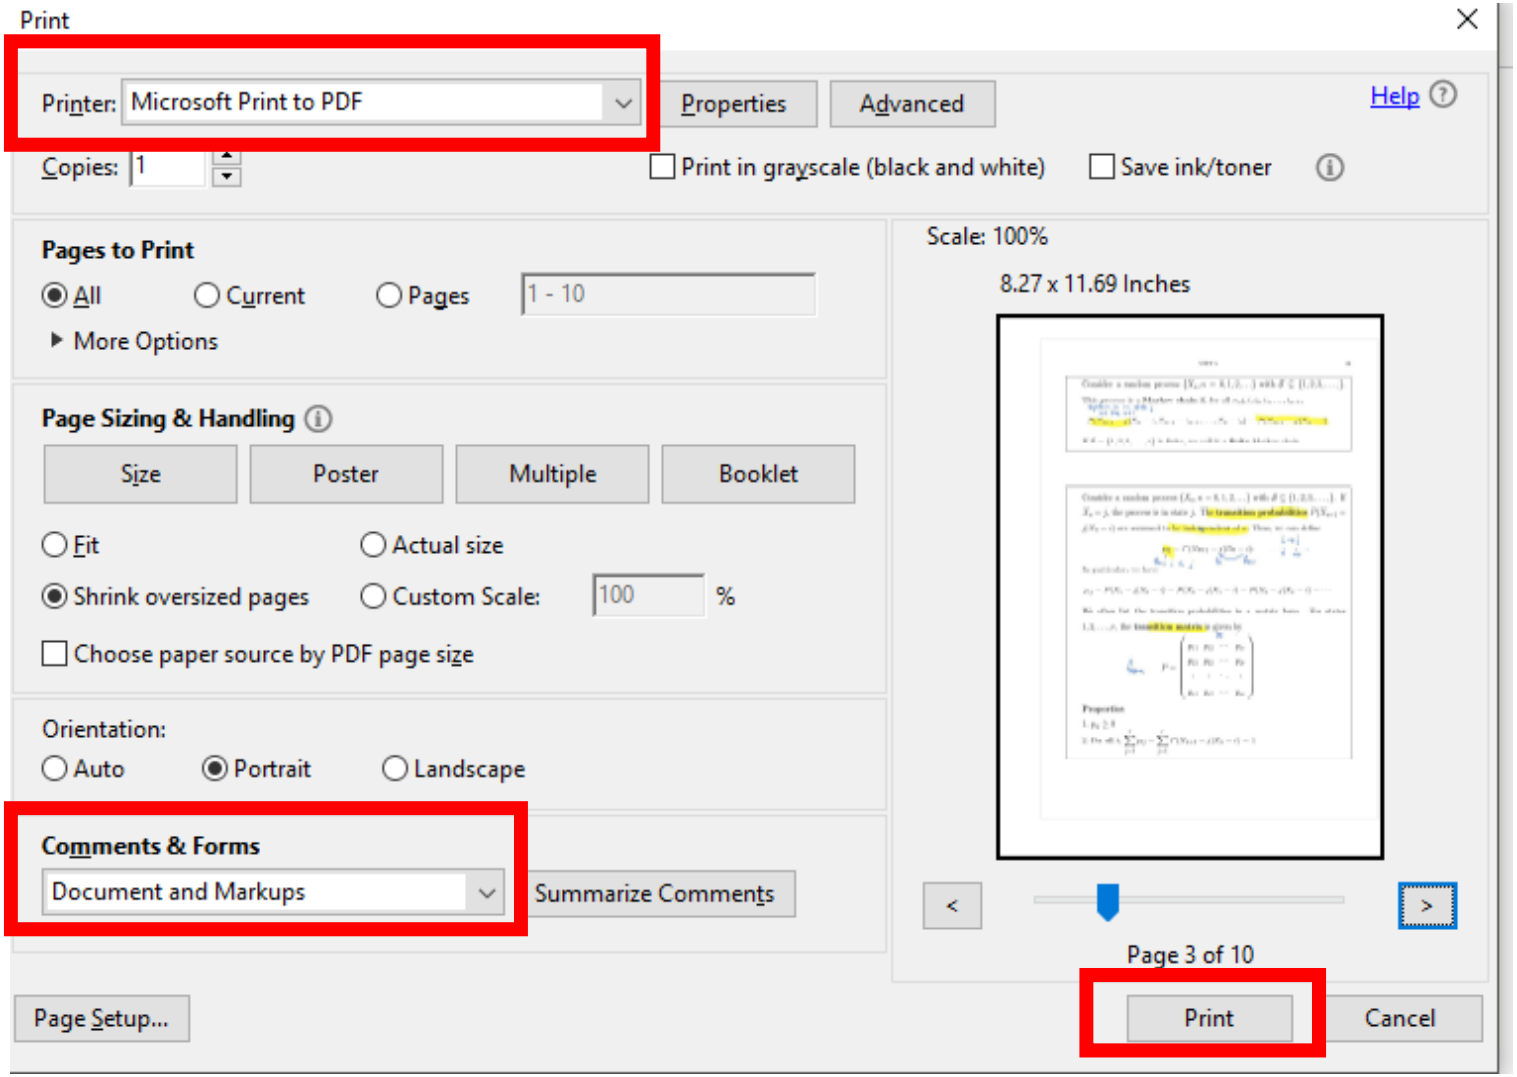

Method 2: Print out the Quiz, Assignment, Midterm, Final etc., and hand write your answers on the paper in a conventional way…

Method 3: Write your answer on an blank sheet, take a snapshot about the answer, paste your answer below the corresponding question number…

Method 1: Answer by iPad or tablet

- Directly write your answer on the PDF file by using the digital pen
- Save your markup whenever you finish each question
- Save the file and then print the file into a new PDF file
- Remember to **flatten** the document in order to include your markup made by the digital pen…

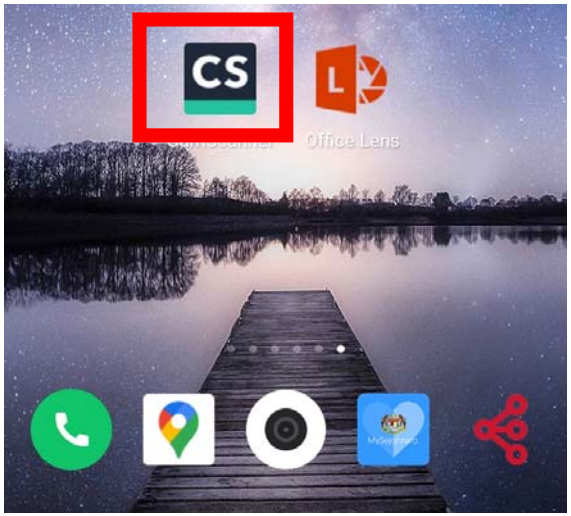

If you are **using a tablet**, please **flatten** your PDF file first before submitting:

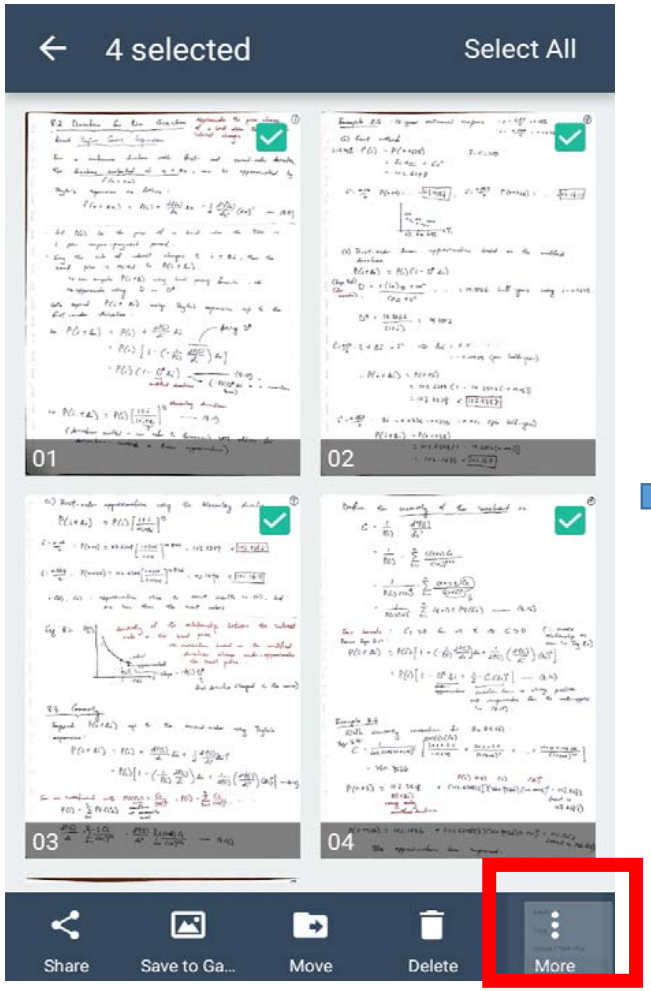

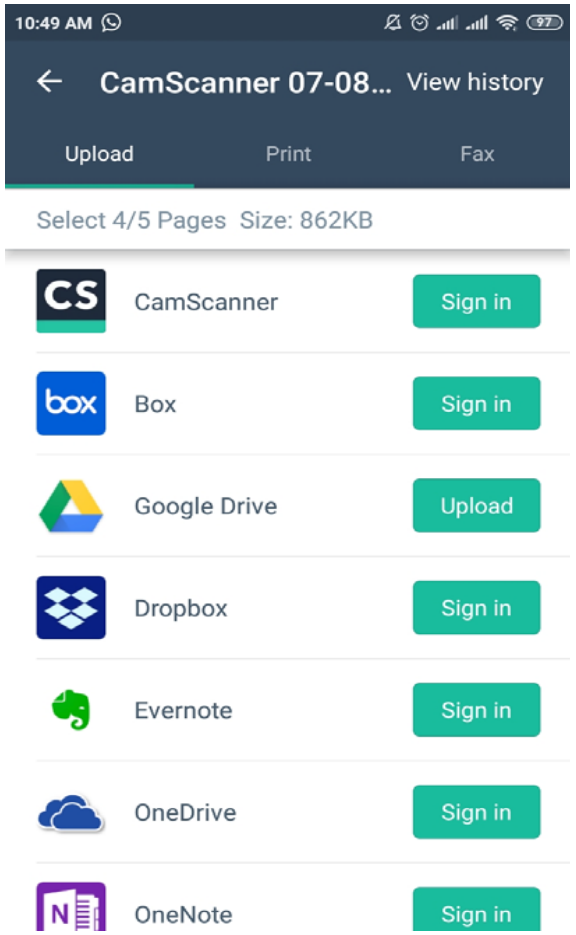

Method 2: Write your answers on the printed paper

- Just write your answer for each question on the paper / answer book in a conventional way
- If the answer sheet is not many enough or space for answering is NOT spatial enough, add a new blank A4 paper wherever you need
- After finish the work, scan all the answer sheets or the answer book into a single PDF file piece by piece, page by page…
- Several available APP is free for download, eg. OneDrive, CamScanner, Office Lens, just scan the answers into PDF format directly.
- DO NOT scan the answer sheets as an image format like png or jpeg, DO NOT insert the images into the WORD, DO NOT convert the image into PDF file, none of the image submission will be accepted…

If you are **using blank papers**, please consider using an app such as CamScanner/Office Lens to take photos of your written answers. **You do not need to paste them in Word and then convert to PDF** if you are using such apps. Once the photos are taken, upload them to Google Drive / OneDrive etc as **ONE (1) PDF** file.

Method 3: Write the answer, take a snapshot, paste your answer to the WORD file

- Write your answer on an blank sheet, take a snapshot about your answer, paste your answer to the corresponding question problem
- Make sure your photo is clear enough, size is big enough, resolution is good enough
- Make sure you paste the answer image in a correct place, answer corresponding to wrong question number will NOT be marked or graded
- Be aware of the brightness of your answer image, be cautious about the quality of your answer image, be reminded NOT to include any part of your body or shadow of yourself…

Types of Unacceptable Submissions

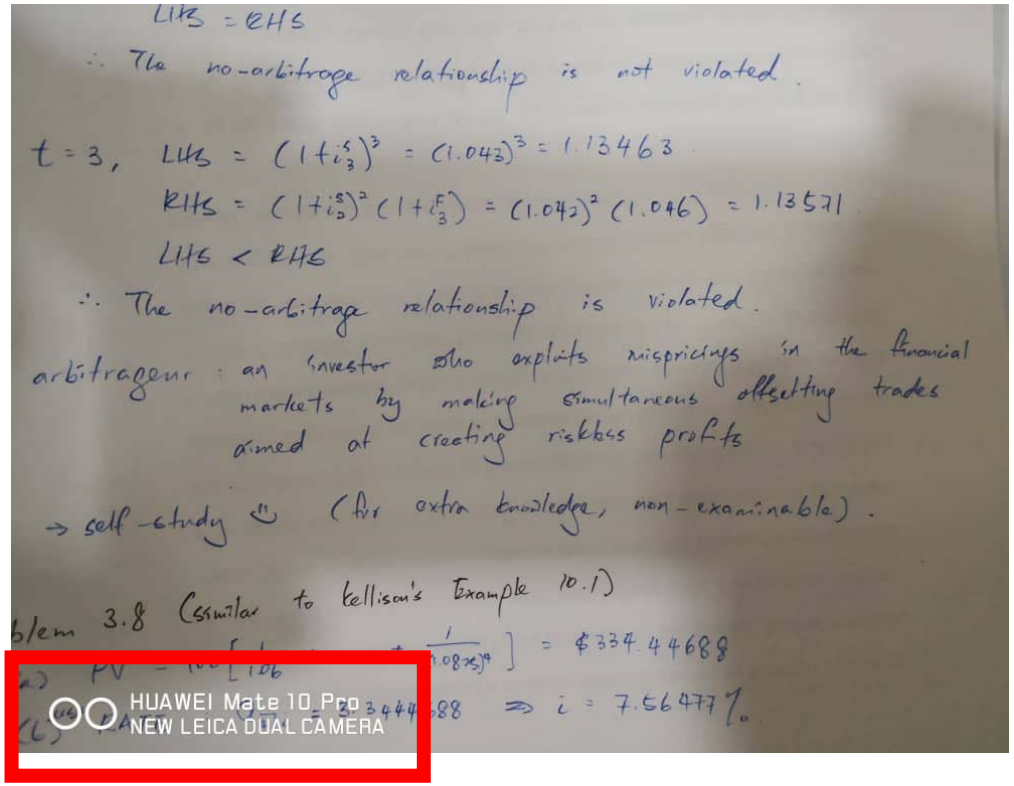

- Wrong angle for the image
- Script is too small or too blur to recognize
- Watermark or fingers or other objects covering parts of your script
- Question number for the answer NOT specified
- Dark image of the answer or shadow of person or other objects makes the script hard to read or grade
- Squeeze all the script pages in one single PDF page
- Taking the photo of the answer sheets instead of scanning the answer sheets
- Place the answers in a messy order, discontinuous display about the answer to a question number

Things to Avoid:

- Awkward angle rotations
- Small and blurry when zoomed in – I will not be able to read your script clearly

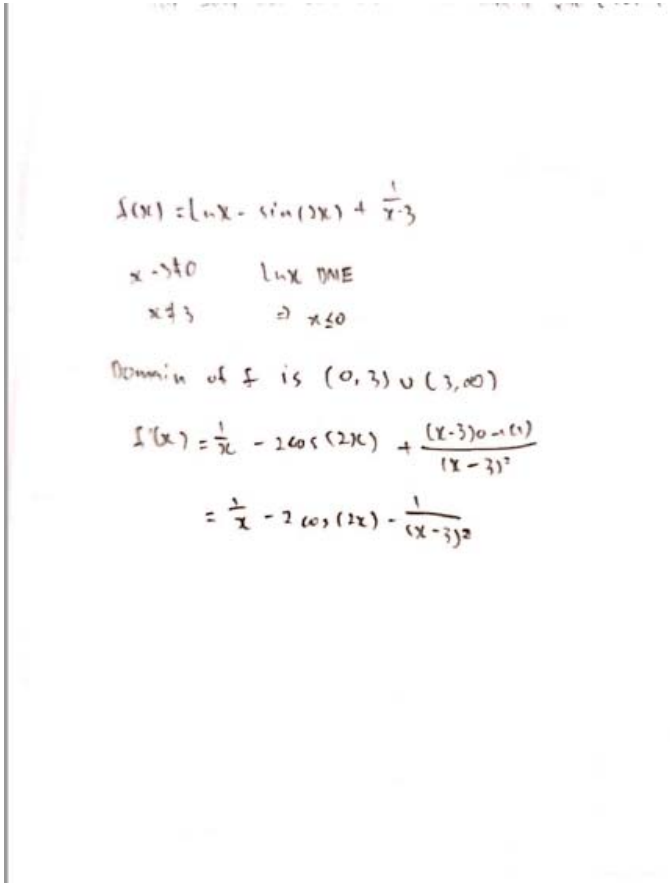

- **Watermarks** - please **remove the watermark** on your photos as the watermark will cover the writings on your script

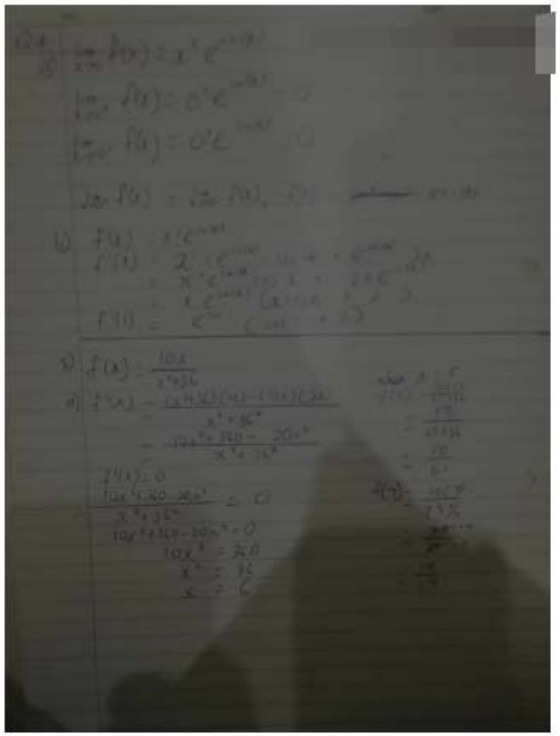

Things to avoid:

- Not mentioning the question number.

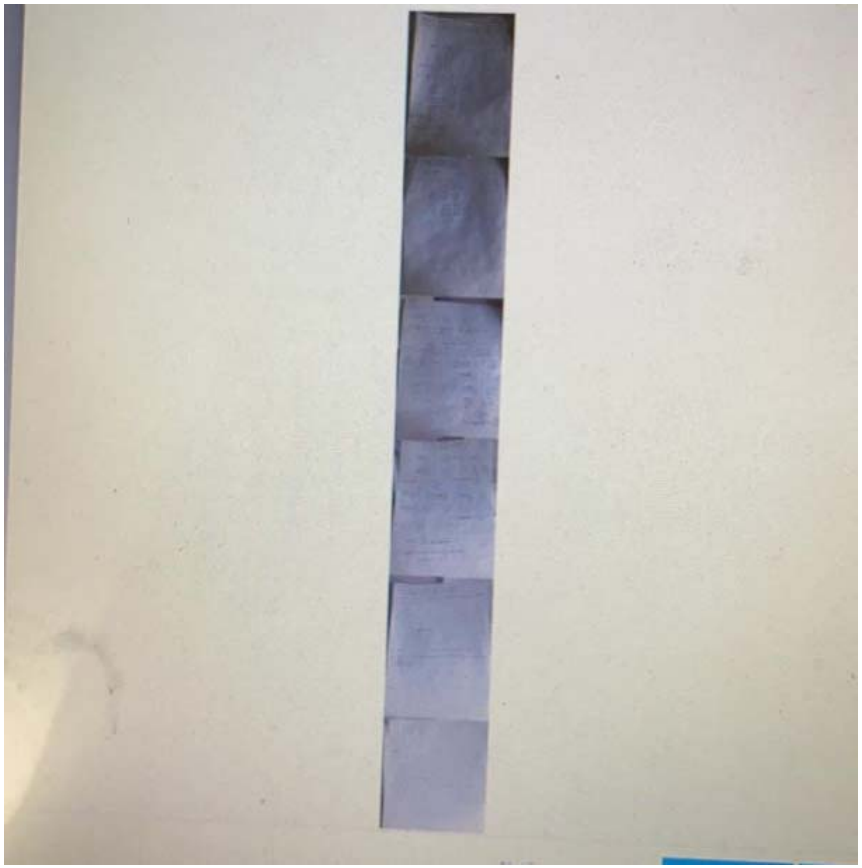

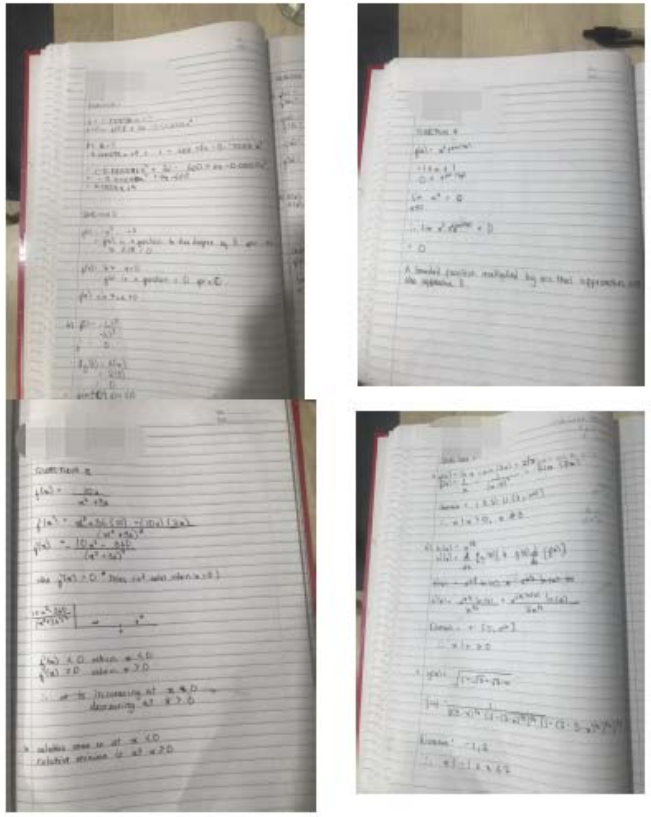

- Dark image with shadow, hard to read the words.
- Suggest to use your phone's flashlight or desk lamp so that your photos are brighter – but if you use CamScanner, the flash will be normally be automatically turned on

Things to Avoid:

- Putting all the pages in one page
- I won’t be able to read your writings at all because when I zoom in, the image will become blurry due to resolution issues

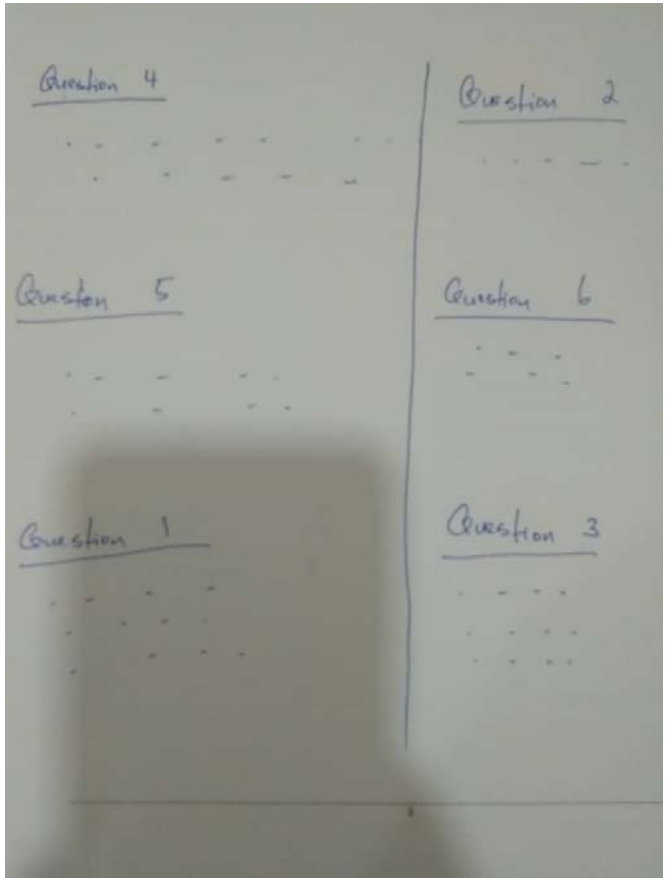

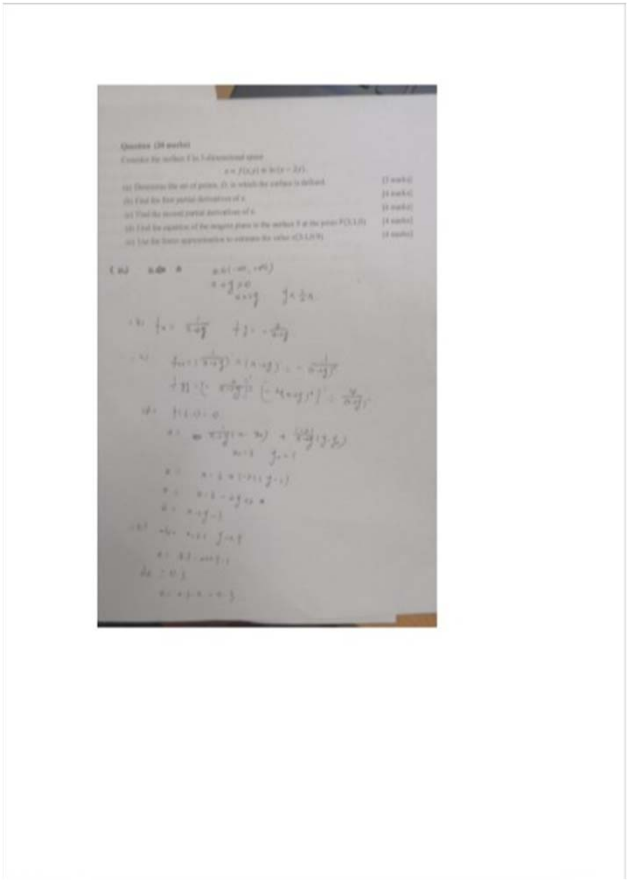

Things to Avoid:

- Putting the questions in the messy order, for example, Question 2, Question 1, Question 4, Question 6, etc.

- Taking the photo of the answer sheets and insert it into WORD file, paper size obviously incorrect…

You save me the trouble
I will save you the ass
