Hamid Tahaei

Instructions/Start-up Guidelines: *how to install Codeblocks* software.

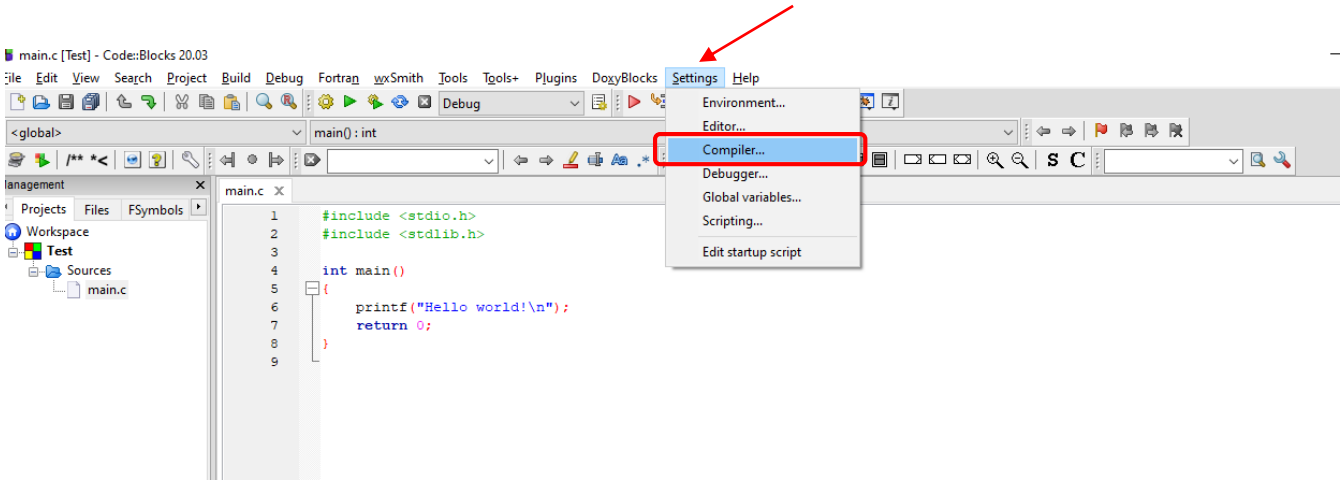

1. Download and install the latest update of Codeblocks from the link below: http://www.codeblocks.org/downloads/26

   NOTE: For older OS'es use older releases. There are releases for many OS version and platforms on the **Sourceforge.net** page.

   NOTE: There are also more recent *nightly builds* available in the **forums** or (for Ubuntu users) in the **Ubuntu PPA repository**. Please note that we consider nightly builds to be *stable*, usually.

2. When installation is completed, launch the codblocks and set MinGW by the auto-detect.
   NOTE: MinGW is a compiler and debugger which is required.

   2.1. *Go to **Settings->Compiler***.

2.2. Select *Toolchain executables*

2.3. Set "*C:\Program Files\CodeBlocks\MinGW*" as the compiler's directory installation

2.4. Click on the *Auto-detect* button

3. Creating a new C++ project in Codeblocks
   Follow the instruction at the URL below:
   https://codeforwin.org/2015/07/how-to-create-new-c-cpp-project-in-codeblocks.html
